Independent Presidential Candidate Harry Braun's Revealing Science & Image of God

As an independent presidential candidate, who is also a molecular biologist, one might assume that Harry Braun is an atheist. But they would be wrong. Braun has a technical paper published on the Phoenix Project Foundation.US website, "The Revealing Science of God," in which he refers to our biological "creators" as a 4-billion-year-old highly-advanced civilization of proteins, which he refers to as "nanobes" in his Phoenix Project book and DVD, because they operate on a nanometer-scale in molecular biology. According to Braun, "the nanobes are the citizens and master engineers within in the city of the cell, whose biochemistry is so complex, that no supercomputer has yet been built that can comprehend and characterize their behavior."

The Cray supercomputer graphics of a protein-scale nanobe shown above were prepared by Arthur J. Olson. Ph.D., Copyright © 1985 by the Research Institute of Scripps Clinic in California.

It is the nanobes that create, transmit, and store all memories in every organism, yet they are being destroyed in every man, woman and child, from the trillions of gallons of chemical poisons that have been generated by the use of oil and other highly-toxic fossil fuels. And the use of oil was dramatically accelerated when the non-toxic and renewable cannabis fuels and plastics were made illegal by oil industry lobbyists in 1937, with no recorded vote in either the House or Senate, and over the objections of Henry Ford, who was using cannabis to both fuel and build his automobiles, with cannabis-based plastics that were non-toxic, biodegradable and 10 times stronger than steel. This "True History of Marijuana" is available on YouTube and it is a must-see documentary for all American citizens who are registered voters, so the cannabis laws can be ended immediately, because they are blatantly unscientific and unconstitutional.

The American Medical Association (AMA) also objected in Congressional Hearings to making cannabis illegal, and their Congressional liaison, Dr. William Woodward, objected to the use of the unknown slang term "marijuana" which he referred to as a "mongrel" word that had no place in medical science. And now the AMA and papers published in *Scientific American* (December 2004) have documented that the THC in cannabis is, in fact, not a toxic drug at all, but a remarkable neurotransmitter used throughout the brain and body to switch on a two-way communication and feedback system, which has completely redefined the science of neurology.

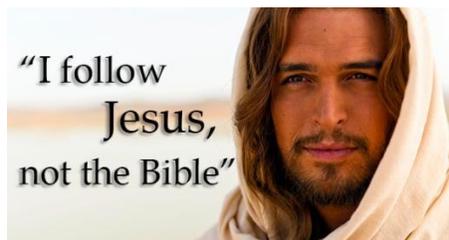

Braun's Revealing Science of God, Page 2

The gastrointestinal track, which has its own bacterial brain and nervous system, also has vast numbers of protein receptors for the THC and other cannabinoids from the remarkable cannabis plant, which have been in the brains and bodies of all vertebrate animals for the past *500 million years*, that goes back to a vast period of time long before Christ or even the dinosaurs existed.

That brings us back to the fact that the nanobes are the biological “creators” of all viruses, bacteria and human beings, as well as their real-time biochemical “operators” from nanosecond to nanosecond. But these ancient proteins are being dissolved into super-sticky amyloid plaques from the oil-based chemical poisons, which are so ubiquitous on the Earth that they now arrive in the wind and the rain worldwide. This occurs because of an immutable law in physics called “diffusion,” which occurs every time cream is poured into coffee. And according to Wikipedia, the global epidemic of “amyloid” plaques is at the heart of many of the most tragic diseases that are now bankrupting the USA, including cancer, Autism and Dementia, which is a critical aspect of the Earth's 6th Mass Extinction event that is now entering its final exponential stages.

So what does Braun think of these truly biblical scale problems, as they relate to Jesus Christ and the various Christian interpretations? “Well,” he says, “it all depends on whether one believes in the New Testament Jesus, which violates Newton's laws of physics with his miracles and virgin births, or the Essene Jesus who was a scientist and a skilled naturopathic physician.

Hippocrates, the Essenes and Jesus

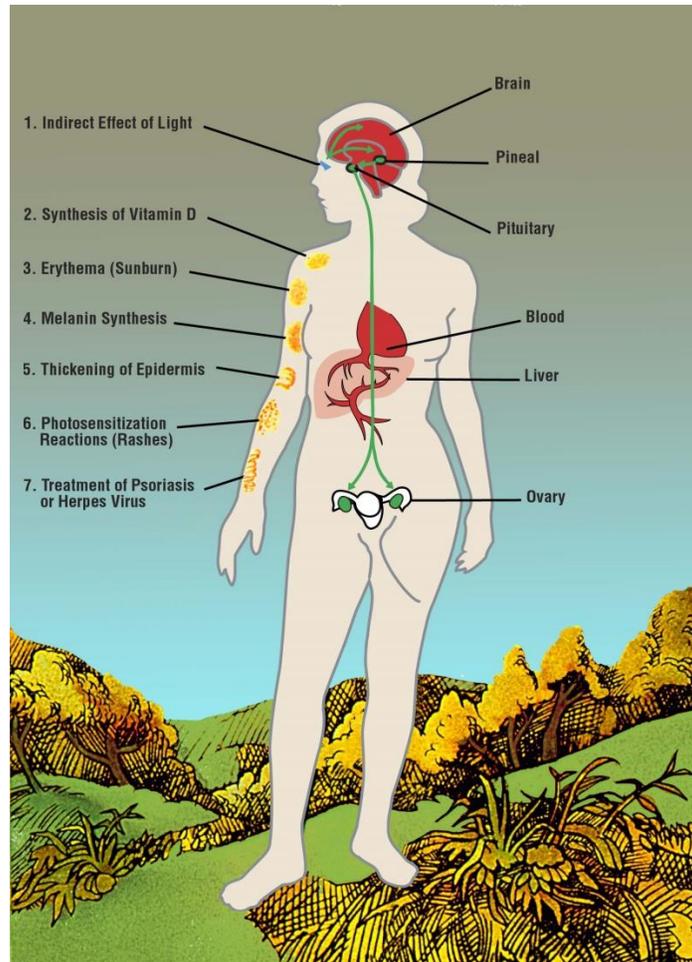

Hippocrates lived in ancient Greece from 460-377 BC, and is referred to as the Father of Western Medicine, who made many insightful observations during his remarkable medical career, including, “**The natural healing force within each one of us (i.e., the nanobes) is the greatest force in getting well.**” and “**our food should be our medicine, and our medicine should be our food,**” which speaks volumes about the mass-production of sugar-based junk food in the U.S.

According to the Dead Sea Scrolls, Jesus had spent considerable time living with the Essenes as a young man, who were an unusual community of scientists, naturopathic physicians and scholars who could both read and write. Thus they were well aware of the teachings of Hippocrates and the other eminent scientists of their day. The Essenes left the polluted cities and established communal societies in the wilderness where all property was held in common, and the Essenes were so impressed with Jesus, that when he left their community, they sent two scribes to follow him and take notes of his teachings in Aramaic, which are titled: *The Essene Gospel of Peace*.

This Essene document, which is available at no cost online, is remarkable for a number of reasons. Unlike the Bible, which has no known authors, the Essene scrolls are original documents that provide naturopathic healing instructions, such as bathing daily, proper exposure to the sun, fasting and eating only live herbal foods, where even the wheat in the Essene bread was sprouted with the sun instead of a high-temperature oven, that would destroy all of the proteins in the food.

Indeed, the Essene Jesus taught that the “angels” of healing were found in sunlight, pure water and wholesome food, which was hard to find in the polluted cities of the day, and the Essene Jesus also taught to eat only one or two “Hippocratic” meals a day, and never eat until you are full. And the teaching by Jesus of these critically important angels (i.e., photons) in sunlight have been confirmed by molecular biologists in recent years, including MIT professor Richard Wurtman.

“The Effects of Light on the Human Body”

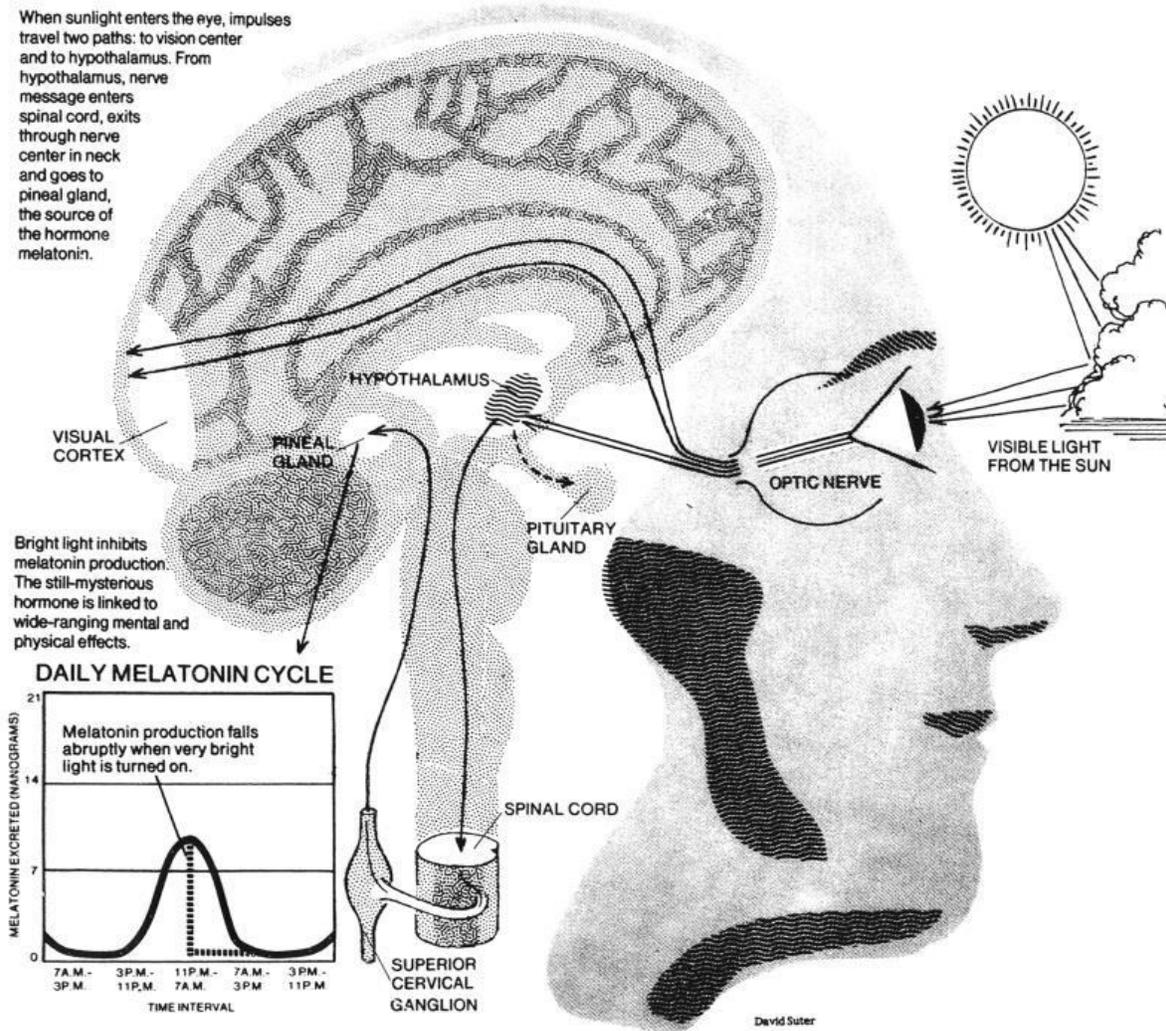

By Richard J. Wurtman, M.D., Ph.D., *Scientific American*, July 1975

Extensive clinical and medical research worldwide has documented that a lack of exposure to natural sunlight, or lamps that simulate sunlight, routinely induces profound pathological conditions in humans and other animals, as well as microorganisms and green plants. Moreover, the highly-energetic ultraviolet (UV) spectral wavelengths down to 290 nanometers are critical for the production of vitamin D3 in the skin, liver and kidneys, which is actually a hormone that has protein receptors located on every cell in the body. The UV spectra also enters deep into the brain via the retinas of the eyes to stimulate the neuroendocrine system.

Yet sunlight deficiency is now epidemic in the U.S., not just because people have been told to avoid the sun, but because in just the past generation, most fully-clothed Americans now spend most of their solar day indoors, and ordinary window glass reflects or absorbs the biologically active UV spectra. And since the 1940s, architects and engineers began designing energy efficient buildings with windows that cannot be opened -- or without windows at all.

Existing lamps emit virtually no UV, thus most urban inhabitants have been inadvertently sealed-off from the intense sea of electromagnetic energy that humans and other primates have evolved to for millions of years, which is made worse by the wide-spread use of chemical sunscreens, which have profound health and financial implications for the health of the U.S. population.

The Ultraviolet Stimulation of the Neuroendocrine System

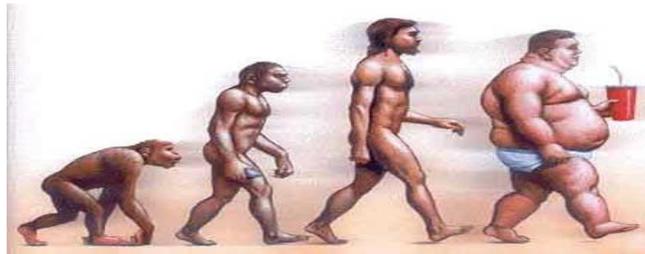

The image above was initially published in The New York Times.

The image above shows the UV spectra being absorbed by specialized photoreceptor cells located in the retina of the eyes, where the high-energy UV photons are then transferred in a vast network of neural pathways that travel deep into the brain, where they stimulate the neuroendocrine system, which includes the pineal, hypothalamus, pituitary glands, and body's immune system. Every cell in the brain and body has protein receptors for D3, which affects one's mood and state-of-mind, as well as the ability of the body to absorb the minerals from the food that is consumed. And in the event that the D3 hormone is unavailable, the body will take the minerals it needs from the teeth and the bones. This is why professor Wurtman and Braun both recommend federal regulations that will require that indoor lighting systems be engineered to simulate natural sunlight in both the visible and nonvisible ultraviolet spectral wavelengths.

Few Americans are aware of these insights of the Essenes and Jesus. Thus most Americans now avoid the sun -- and the food, air and water are all contaminated with a mixture of thousands of oil-based chemical poisons that now arrive in the wind and rain. Ironically, the only pure water that now exists comes out of the exhausts of hydrogen-fueled internal combustion engines or fuel cells. And the only poison-free food now available is grown indoors in facilities like those pioneered in Denmark, which also developed an international shipping system that allows the organic produce to stay on the vine, even in winter, until an order is received from any customer worldwide. And these renewable exports are making Denmark wealthy. If such systems are powered by wind and hydrogen energy production systems, they become "Lifeboats" that will be able to operate in spite of the climate change chaos that is destroying food systems worldwide.

The Obesity Epidemic

American children are now born obese, and over 300,000 obesity-related deaths now occur annually in the U.S. And the cause is clear. In one generation, food and chemical corporations have used the scientific method to optimize the shelf life and addictive nature of the refined sugar-based foods that are eight times more addictive than cocaine. This toxic junk food has caused epidemics of heart and liver disease, cancer and diabetes. This highly-processed junk food is made by corporations that are only interested in maximizing profits, which is the same reason USA Today reported that hospitals increased the cost of a Tylenol pill by 10,000 percent!

William Davis, M.D., author of *Wheatbelly*, recommends avoiding the highly-processed foods in most U.S. supermarkets, which would be illegal if nutritional scientists had any say on the subject. Dr. Davis points out that the wheat now used in bread is not wheat at all, because the corporations like Monsanto have made over 25,000 genetic changes in the plant, which is why two slices of bread now have as much refined sugar as there is in an eight ounce soft drink.

Of equal concern is that the proteins now produced by these human-modified genes have created chaos with the billions of other ancient proteins and bacteria in the gastrointestinal track. This is all perfectly legal because the food industry lobbyists wrote the laws that few members of Congress ever read. Dr. Davis also suggests that individuals should discipline themselves to eat what he refers to as "single ingredient foods" such as fruit, nuts, honey or vegetables, but even if they are grown organically, they will still not be nearly nutritious as the wild foods that have not been genetically modified and sprayed with poisons for profit.

As president, Harry Braun will make every effort to convince the majority to end the production of corporate junk foods in America, that are made with genetically modified grains and toxic refined sugar and salt. And only by shifting from an Oil Economy to a Solar Hydrogen Economy can the air and water in America ever be returned to a naturally pure state, as the USA enters a new era of sustainable prosperity without pollution.
