

# CANDIDATES DEBATE

## Harry Braun vs. John McCain

November 1, 1984

### “The World According to Braun,”

by Doug MacEachern

*The New Times*, September 26, 1984, page 3, 1984

“Wouldn’t it be great to find a candidate for the U.S. Congress who had a solution to all of the catastrophic problems of our day?

The list of those problems is long, but let’s look at the top few: impending nuclear holocaust; pollution; (exponential) depletion of energy resources, and economic instability spurred on by vast deficits. A solution to any one of these fearful crises would undoubtedly merit bags full of Nobel prizes for whoever offered it. Well, someone *does* have a solution. At least he sincerely believes he does. Harry Braun, Democratic opponent of John McCain in District 1, is convinced that his solution – a worldwide conversion to hydrogen power, from power now supplied by fossil fuels & nuclear plants – represents the difference between an idyllic future and doomsday.”

If the national news media had made America aware of Harry Braun’s Phoenix Project plan in 1984 to shift from an Oil Economy to a Hydrogen Economy that was advocated by thousands of scientists and engineers worldwide, the multi-trillion dollar oil wars would never have happened and the climate change chaos would be dramatically reduced with the only zero-carbon fuel, which is hydrogen.

## Harry Braun vs John McCain, page 2

Independent presidential candidate Harry Braun's vision in 2016 is still focused on replacing all of the fossil and nuclear fuels that are in the final stages of making the Earth uninhabitable, with less than three million wind-powered hydrogen production systems by 2020, which will include the deployment of sea-based "windships" that will provide a vast sanctuary for the remaining fish and ocean ecosystems that are being driven into extinction from unregulated "free market" forces.

The key to this energy "transition of substance" is a political "transition of substance" to empower the majority of registered voters to replace the lobbyist (i.e., bribery)-based American Republic and its toxic and unsustainable Oil Economy that is making the Earth uninhabitable, with a majority rule Democracy and solar-sourced Hydrogen Economy that is both pollution-free and inexhaustible by ratifying Braun's proposed 28-word, 28th Amendment for Democracy:

**"We the People, hereby empower the majority of American citizens to approve all laws, federal legislation, presidential executive orders, and judicial decisions that impact the majority of citizens."**

Braun is the founder and Senior Scientist of Mesa Wind LLC, a wind project development company, as well as the Phoenix Project Foundation.US, the Science News Network.US and the Democracy Amendment USA.US superPac. His Wikipedia article is titled "Harry Braun," and his Published History began with his Congressional race against John McCain in 1984, which is also linked on the BraunforPresident.US website.

Braun is running for President for many reasons, but no issue is more important than the fact that none of the existing presidential candidates from either party are aware of or discussing the Oil Age-induced sixth mass-extinction event in the Earth's 4-billion-year-old history, which is now entering its final exponential stages -- which means it is almost over.

The fossil fuel-induced climate change chaos that is melting the arctic is now causing epic floods (all of which are highly-toxic), droughts, fires and superstorm chaos that is already destroying global food production systems, and the oil-based chemical contamination of the Earth and atmosphere has been absorbed by every man, woman and child worldwide, including the unborn who soak in a contaminated womb from the point of conception, with a mixture of over 85,000 unregulated and highly-toxic chemicals such as gasoline, that have been in increasing levels of mass-production since the Oil Age began in the 1860's.

Hydrogen made from water with sunlight has been used all photosynthetic proteins, microbes and plants for the past 3 billion years, and in the year 1800, hydrogen was made from water with electricity. The world's first automobile built in 1807 was using such "electrolytic" hydrogen because it was much simpler to produce than gasoline, which would not be available for another generation. Thus the Oil Age and the death of the known planet to support life was never necessary. It was just highly profitable for multinational oil corporations.

Media inquiries can contact Harry Braun at 770-905-7000 or 770-905-7020 or on his Contact Us section of his [BraunForPresident.US](http://BraunForPresident.US) website.
