

Why the Majority of Americans are going to elect Harry Braun for President in 2016.

Empowering the Majority is Critical

Independent Presidential Candidate Harry Braun is focused on replacing America's bribery-based Republic and its toxic Oil Economy that is making the Earth uninhabitable, with a Democracy and solar-sourced Hydrogen Economy by ratifying Braun's proposed Article V Democracy Amendment, with a fully-verifiable Article V Citizen Ballot that can be downloaded from the DemocracyAmendmentUSA.us website. Braun is the only presidential candidate in the USA who is an interdisciplinary scientist that represents thousands of distinguished scientists and engineers worldwide, who are all members of the International Association for Hydrogen Energy (iahe.org) that has been focused on implementing a Hydrogen Economy since 1974.

The pieces to the puzzle include the endless and tragic Oil Wars; scientist Harry Braun; the Oil Age that is almost over; wind-sourced hydrogen can power the world; a BMW hydrogen V-12 engine and liquid hydrogen storage dewar; a liquid hydrogen tanker; a Lockheed OTEC plant; Windships; and a Honda solar hydrogen production and pumping system.

Harry Braun is shown above in his office in Canton, Georgia with a Lockheed Martin solar ocean thermal "OTEC" hydrogen, seafood and fresh water-production system in the background on the left, and a "windship" hydrogen-production system on the right that was developed in the 1970's by engineering professor William Heronemus, who also served as superintendent of shipbuilding for the U.S. Navy. Heronemus also stated in a filmed interview with Braun that the U.S. Navy should be in charge of building, deploying, operating and protecting the strategically important fleets of windships and OTEC hydrogen production, storage and transportation systems, which can rapidly replace all of the highly-toxic fossil and nuclear fuels now used in the USA and other countries worldwide with wartime-speed (i.e., before 2025).

The Endless Multi-Trillion Dollar Oil Wars & Catastrophic Climate Change

Rather than shifting from an Oil Economy to a Hydrogen Economy with state-of-the-art technologies that are shown in the image gallery above, both Bush administrations decided to invade Iraq for its vast oil reserves, and senior officials testified to Congress that the cost of the second Iraq war would likely be recovered from Iraq's oil revenues. But after the war, China got most of the oil, in spite of the fact that the U.S. had spent well over \$2 trillion on the war, plus an additional 4 to 6 trillion dollars in long-term medical costs that will be spent for caring for the over 500,000 wounded veterans, as well as the interest costs on the borrowed money for the seemingly endless Oil Wars. And in addition, Princeton and Harvard University studies have calculated that multinational oil corporations received an additional \$10 trillion in subsidies from American taxpayers for oil tanker protection services from 1970 to 2010.

The recent Climate Change Conference in Paris utterly failed to offer any alternatives to using oil and other fossil fuels because they are not aware of the thousands of distinguished scientists and engineers worldwide, who have been working on the fundamental solution, who are members of the International Association for Hydrogen Energy (iahe.org), which Braun has been an Advisory Board Member of since 1981. However, scientists and engineers have proposed since the 1920's to replace oil and fossil fuels that are highly-toxic and rapidly diminishing with hydrogen fuel made from water with electricity generated from land and sea-based wind systems and other solar technologies like OTEC that works 24/7, that were initially developed in the 1800's, and which are carbon-free, non-toxic and completely renewable.

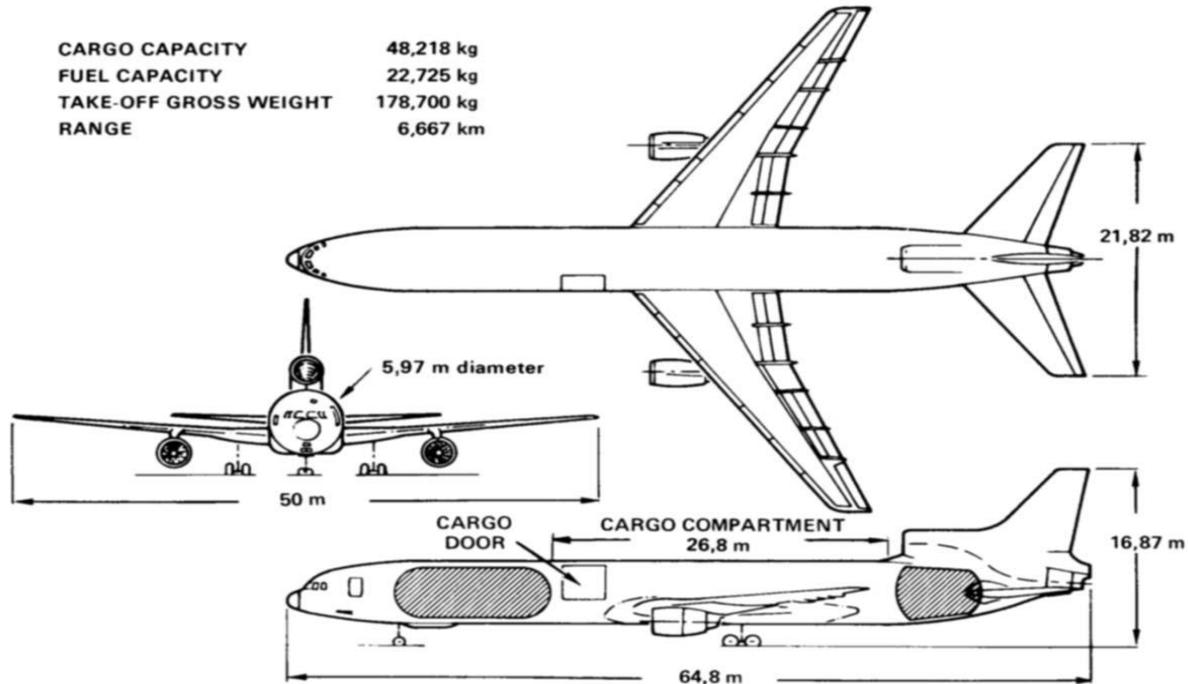

Lockheed Martin Liquid Hydrogen Aircraft

Studies in the 1970's by Lockheed found that liquid hydrogen (LH₂)-fueled aircraft would be safer, lighter and quieter, requiring smaller wing areas, shorter runways, and less maintenance, while eliminating CO₂ and other toxic carbon emissions entirely. LH₂ aircraft use less fuel per flight mile, and because of their 40% weight reduction, their range or payload would be nearly doubled. The Lockheed LH₂ aircraft imaged above on the left is being refueled from LH₂ spherical tanks located in the distance, while the advanced Lockheed hydrogen aircraft design on the right takes full advantage of using LH₂ as an aircraft fuel.

Lockheed engineers led by Dan Brewer and Willis Hawkins concluded that liquid hydrogen was the safest and most practical fuel that could be used in commercial aircraft, and they demonstrated in the illustration above how to modify existing commercial aircraft by integrating the larger (about four times by volume) cryogenic liquid hydrogen storage tanks in the two shaded areas of the fuselage without increasing drag. Given this innovative design, It would be impossible to high-jack the aircraft from the passenger compartment, and the structural integrity of the fuselage was significantly improved in the event of a crash landing, which underscores how using hydrogen fuel significantly increases the performance of the vehicle.

Modifying Existing Aircraft for Liquid Hydrogen Fuel

Harry Braun's Phoenix Project Plan

Given the U.S. now consumes approximately 100 quads of energy annually, approximately 2.7 million two megawatt wind-powered hydrogen production systems would permanently replace all of the fossil and nuclear fuels now used in the U.S., and they are no more difficult to mass-produce than the over 17 million vehicles that are now sold in the U.S. each year. Moreover, 17 million wind systems would displace all toxic fossil and nuclear fuels now used worldwide. Assuming costs of \$1,000 per installed kilowatt in high-volume mass-production, the capital costs for the systems in the U.S. would be \$4 trillion, which would provide a renewable rate of return of over \$1 trillion annually with fuels and chemicals that are both pollution-free and inexhaustible. Every existing power plant and vehicle, including aircraft, can be modified to use hydrogen. Thus, the obstacles to implementing a Hydrogen Economy in the U.S. by 2020 and worldwide by 2025 are not technical or economic -- *they are political*.

Specifically, the primary obstacle to this pollution-free Hydrogen Economy is and always has always been the dysfunctional nature of America's bribery-based Republic, which allows candidates from both political parties to be bribed by thousands of lobbyists from the Oil Industrial Complex, which now includes the major chemical, pharmaceutical, and network news corporations, as well as the major Wall Street banks.

The Democracy Amendment

Given this reality, Harry Braun has organized his independent presidential campaign as an Article V Constitutional Convention, that will bypass oil industry lobbyists and the Congress in order to pass and ratify his proposed Democracy Amendment, that will transfer all political power from the political parties, the lobbyists, and the elected officials they bribe, to the majority of voters, with an Article V Citizen Ballot that can be downloaded as a verifiable paper ballot from the DemocracyAmendmentUSA.net website.

And as per Article V of the U.S. Constitution, when the majority of registered voters in three-fourths of the states (i.e., 38 states) mail their Article V paper ballot to their Secretary of State's office, where the ballots can be verified, counted in public, and archived, the 28-word, 28th Amendment for Democracy will then be ratified. Indeed, one wonders why all elections aren't conducted in this convenient and verifiable way.

Few Americans are aware that over three-fourths of the votes in national elections are counted in secret by private right-wing corporations, with no government oversight. As Joseph Stalin in Russia observed, "It's not the voters who count, but who counts the votes." But once the majority is empowered, all things will then be possible as America's bribery-based Republic is replaced with a Universal Mind of over 60 million voters in a real Constitutional Democracy, with a United States Citizens Congress that will be operated without secrecy or bribery, where elected officials will truly become the servants of the majority.

Moreover, given the exponentially worsening energy, economic and climate change State of Emergency that now exists, the Democracy Amendment needs to be ratified long before the next unverifiable election in 2016, so that millions of Americans can be hired immediately to build and operate wind and hydrogen-powered "Lifeboat" and larger "Arcology Ark" indoor food and biochemical production systems in every community, which will be able to operate in spite of the chemical contamination and climate change chaos that is already contaminating and destroying food production and water systems worldwide.

Once the majority is in control, they can then immediately use the same type of verifiable paper ballots that were used to ratify the Democracy Amendment, to determine who their elected representatives will be, whose term limits will likely be determined by the majority of voters they represent. Braun is confident that in the process of finishing this American Revolution for Democracy, the majority of voters will become aware of the critical need for the next president of the United States to focus on working with world leaders and the International Association for Hydrogen Energy to organize and direct a global Hydrogen Production Board of scientists and engineers worldwide, who will refine and implement Braun's 5-year Phoenix Project Plan (P3) to replace the highly-toxic and unsustainable Oil Economy that is rapidly making the Earth uninhabitable, with a solar-sourced global Hydrogen Economy by 2025.

Economic Democracy

Given the wind-powered hydrogen production technologies were developed in the 1800's, the technology has been in the public domain for over a century, so the trillions of dollars that would be generated each year from such systems would not go to private multinational oil corporations and the banks that they own, but to the United States Treasury, which would profoundly reduce taxes on the middle class while reversing the exponential debt and the Federal Reserve Board's "quantitative easing" policy of printing trillions of dollars, which has devalued the U.S. Dollar by over 90 percent just since 1970.

These policies are treason against the American people, which is underscored by the observations and warnings made by Thomas Jefferson when he wrote: "All authority belongs to the people. I believe that banking institutions are more dangerous to our liberties than standing armies. If the American people ever allow private banks to control the issue of their currency, first by inflation, then by deflation, the banks and corporations that will grow up around the banks will deprive the people of all property until their children wake-up homeless on the continent their fathers conquered. The issuing power should be taken from the banks and restored to the people, to whom it properly belongs."

Jefferson also wrote that "Hemp (i.e., cannabis) is of first necessity to the wealth and protection of the country." And as Henry Ford demonstrated in the 1920's, the least expensive hydrogen, ethanol and non-toxic plastics that were 10 times stronger than steel were all made from cannabis. This was the real reason oil company lobbyists led by Andrew Mellon changed the name of cannabis to an unknown slang term "marihuana" (spelled with an "h"), and although scientists now know that the THC in cannabis is not a toxic drug at all, but a 500 million-year-old neurotransmitter, it was made illegal a dangerous "new" drug in 1937 with without any recorded vote in either the House or Senate, and over the objections of Henry Ford and the American Medical Association. Nor was a constitutional amendment passed or ratified, which was required for making alcohol illegal, as per Article 1, Section 8 of the U.S. Constitution.

An excellent YouTube documentary, "*The True History of Marijuana*," is available online at no cost and it should be viewed by every voter to insure that the blatantly unscientific and unconstitutional cannabis laws are ended immediately. While the oil industry was successful in replacing the Cannabis Economy with the highly-toxic Oil Economy, the tragic result has been the 6th mass-extinction event in the Earth's 4.5 billion-year-oil history that is now in its final exponential stages given over 90% of the global ocean ecosystems are already lost. Medical physics professor John Gofman once observed that only one word came to mind regarding such indiscriminate chemical and radiological contamination of all life on the Earth, and that word was *Nuremberg*, which should apply to corrupt elected officials like Hillary Clinton.

Sea-based wind-powered hydrogen systems are especially critical because they will create vast sanctuaries in the oceans for the remaining fish and marine organisms that are in the final stages of being hunted into extinction from unregulated "free market" forces. Both land and sea based wind-powered hydrogen production systems could have been mass-produced in the 1800's by simply replacing the sails on existing ships with rows of wooden wind turbines, thereby avoiding the Oil Age-induced global toxic chemical contamination that is rapidly making the Earth uninhabitable, which is a direct result of bribery-based Republican governments worldwide, including the USA, Russia and China.

Braun has been advocating replacing the Oil Economy with a Hydrogen Economy since his Arizona Congressional Campaign against John McCain in 1984, when he warned against wasting trillions of dollars on the mindless arms race and the highly-toxic Oil Wars in Muslim countries, which are now at the heart of the radical Muslim ideology of the Sunni Islamic State that the U.S. is now bombing, which ironically is the only counter force to the expanding Iranian influence in the Middle East.

Why the Radical Muslim Ideology Hates America

Few Americans and none of the other presidential candidates are apparently aware that oil companies have used U.S. military forces to bomb and mass-murder the indigenous peoples in the Middle East and elsewhere for oil since World War II, while the CIA secretly installed brutal dictators like the Shaw of Iran, (which is the real reason why the Iranian students stormed the U.S. Embassy); Saddam Hussein, (who was a loyal ally to U.S. presidents from Kennedy to Reagan); and the current brutal military dictator in Egypt who is planning to execute Egypt's only democratically elected president, Mohamad Morsi, a distinguished professor of engineering who was educated in the U.S. -- who happens to be a Muslim.

But even worse was the false intelligence reports that were used by both of the Bush administrations, which proceeded to spend over \$6 trillion of Americans taxpayers money to attack Iraq and slaughter hundreds of thousands of innocent Iraqis, while destroying the Cradle of Civilization with radioactive bombs and munitions that have a half-life of 4.5 billion years, spreading the poisons worldwide. While most Americans blame the radical Sunni Muslims for starting the violence and mass-murder in the Middle East, the real cause was American foreign policy since World War II, which has been focused on serving the interests of private multinational oil corporations, including Halliburton, Exxon and Chevron. This unnecessary policy of mass-suicide for all life on the Earth must be changed immediately, and it begins with the majority being made aware of Harry Braun's presidential campaign and online Constitutional Convention to both pass and ratify his proposed Article V Democracy Amendment with wartime-speed.

This is why if presidential candidates in the U.S. are elected on the quality of ideas they present, Harry Braun is clearly going to be the next president of the United States, long before the next phony and unverifiable elections that are scheduled in November. Braun is available for questions or interviews by calling 770-905-7000 or 770-905-7020. He can also be emailed at hb@BraunforPresident.US. Details on Braun's interdisciplinary research and video documentaries are published on the following websites:

The Phoenix Project

Replacing all oil and other highly-toxic fossil & nuclear fuels with wind and other solar-sourced hydrogen energy, agricultural & economic systems by 2025.

Why Hydrogen

Hydrogen is the “Holy Grail” of all energy and life on the Earth, and is the simplest, most abundant, and lightest element in the known Universe, which is why it so safe in the events of accidents. All photosynthetic proteins, microbes and green plants have been successfully using solar-sourced hydrogen from water on a global scale with no problems for over 3 billion years. Hydrogen is the only non-toxic renewable fuel that was first made from water with electricity in the year 1800. Seven years later, an engineer in Switzerland used such electrolytic hydrogen to fuel the world’s first automobile with an internal combustion engine shown below.

Thousands of automotive vehicles have been modified to use hydrogen fuel since the 1800’s, including all of the Saturn V Moon Rockets and Space Shuttles, as well as the SR-72 liquid hydrogen-fueled hypersonic super drone shown below, that is being developed by Lockheed Martin for the U.S. Air Force, which will fly twice as fast (Mach 6) as the SR-71 hydrocarbon-fueled Blackbird that it’s replacing. And unlike the Blackbird, the SR-72 will be fully-weaponized for high-speed air strikes.
